

Coffee Vending Machines

A ScaleBlaster unit was installed on this coffee vending machine located at a busy newspaper printing plant in Centre Hall, PA.

A good hot cup of coffee for its employees is a necessity for any company. Coffee vending machines supply this demand, but often require service calls to clean or replace the heating elements and to unclog the water lines that get full of scale. Coffee vending machine owners had no alternative but to absorb the cost of service calls & maintenance before the discovery of the electronic descaler, ScaleBlaster.

Heating Elements

Exhibit "A"

Exhibit "B"

The heating element pictured in the middle, Exhibit "A", was removed from the vending machine pictured on the far left, 1 week after installation. It was so severely damaged by scale that it had to be replaced. The heating element just to the left, Exhibit "B", was installed along with the ScaleBlaster SB-50, and is shown here 5 weeks after installation. The ScaleBlaster changed the adhesive properties of the scale to a powdery form that is non-corrosive and is easily wiped away. The owners of the vending machine company have not had to make a service call on the coffee machines that is scale related since the descaler was installed.

This Model SB-50, pictured on the left is the unit used to expand the life of heating elements and keep the water lines unclogged in coffee vending machines.

The newspaper printing company pictured above was so impressed with the electronic descaler on their coffee vending machines, they purchased a larger system for their entire building and are experiencing great results!

- **Reduces maintenance and service calls dramatically.**
- **Reduces element replacement and cleaning**
- **Eliminates line clogging due to scale build-up**
- **Improves taste of coffee by cleaning out pipes of scale and eliminating bacteria that breeds in the scale**
- **Improves hot water heater efficiency**
- **Maintain quality control of coffee production**

Dear Sir,

This is to inform you of how impressed we are and how much money your SB50 Descaler ScaleBlaster has saved our company in service calls and maintenance components and parts for our vending machine routes! At one specific location at the local newspaper printing company our coffee vending machines were experiencing such scale build-up that they required two service calls per week for element replacement and line unclogging. Your local distributor suggested the installation of the SB50 unit on the feed line to the machines which run at about 204 degrees. After the installation of the SB50 units, we have not had to run a single or double call in eight weeks other than to inspect the coils and elements after the eight week trial period your dealer allowed us to try. As the before and after pictures enclosed clearly show, the difference is remarkable! We not only immediately purchased the two units in the newspaper company but purchased an additional four units for other troublesome locations. It is difficult to say how much money and time these units have saved the company but needless to say, they have already paid for themselves many times over! What a great, maintenance free, cost effective product! We will continue to purchase additional units as the applications arise! It is also our understanding that the NewsPaper Company that the machines were installed in was so impressed that it purchased your large unit for the entire newspaper building and are experiencing great results!

Sincerely,

Mike Miller
Manager, State Amusement Company.

Letter written by Mike Miller, manager, State Amusement Company, confirms the amazing results from the electronic descaler, ScaleBlaster.
